

Software and AI for operations that happen in the physical world.

We are an engineering company in İzmir, Türkiye. We build the software layer for organisations that run something real: a coastline, a refinery, a development, a fleet, a hotel group, a squad. **Not advice, not a pilot deck. Systems that are in use.**

Company profile

NCAGE TN069 · registered defence supplier

WhatsApp +90 530 597 41 87 · serdarbatkan@bbateknoloji.com

WHERE WE WORK

Türkiye

Engineering base, İzmir. Public sector, energy, municipal and sports clients.

United Arab Emirates

Delivering with a local partner in Dubai. Our largest deployment.

Oman · Saudi Arabia · Qatar

Active partner conversations across unmanned systems and facility security.

Djibouti

Market entry with a local co-sell partner; service platform live in four languages.

HOW WE WORK

We do not compete with our partners. We go to the customer beside them.

In every market we enter we look for one strong local company that already owns the customer relationship, the licences and the field crews, and we bring the technology that company cannot build on its own. Your customer stays yours. The technology is ours. The work is joint, and BBA is named as the engineering behind it.

WHAT WE BUILD

PRIMARY LINE

Unmanned systems and autonomy

The control, autonomy and AI layer for air, ground and surface vehicles. We do not manufacture aircraft. We build what turns a flight into something a customer pays for every month.

- One control layer across DJI, PX4, ArduPilot and ground vehicles
- Twenty-eight analyses out of a single flight, run on the customer's own hardware
- An operable 3D twin of a site, its equipment and its vehicles
- GPS-denied navigation, swarm control, legged and wheeled robots
- A nine-module security and operations centre
- GNSS interference and mission integrity

[Full detail, ten products →](#)

CORE SEGMENT

Facility security and operations

Cameras, drones, ground vehicles and patrols run from one control centre that classifies what it sees, ranks it and sends the nearest unit. On-premises, with an audit log the operator cannot rewrite.

- Built for a 303,000 m² development in Dubai, nine modules in one screen
- Detection, dispatch and evidence only. Nothing armed.

[Product 07 and 10 →](#)

APPLIED AI

Computer vision on real footage

Detection, counting, change between two dated visits, thermal and incident detection, condition classification. Specified with a Gulf customer against measured acceptance criteria: people counting within $\pm 10\%$, intrusion recall above 90%, fire above 85%, shoreline position within three metres.

- Runs offline, on the customer's own machines, where footage cannot leave the country

CONVERSATIONAL AI

AI concierge for service businesses

WhatsApp and Instagram agents that answer guests in their own language, take reservations, and hand over to staff only when needed. Live in hotels and restaurants, integrated with property management systems.

SPORTS TECHNOLOGY

Performance and injury analytics

Wearable and video data turned into workload management and injury risk. Heart-rate and accelerometer pipelines, match video analysis, squad depth and scouting.

PROPERTY OPERATIONS

Residential and development platforms

A three-dimensional operating interface for residential compounds and developments: every building, unit and asset in one model, with work orders, escalations and reporting attached to it.

SELECTED REFERENCES

Dubai Municipality

IN DELIVERY

Coastal monitoring programme delivered together with our local partner in the UAE. Fifteen analyses from a single flight, running on the customer's own servers, against numeric acceptance criteria.

303,000 m² development, Dubai

BUILT

Security and operations platform for one of the largest retail developments in the world: drone feeds, fixed cameras, plate recognition, access control and patrol routes in one operating picture.

Türkiye Petrolleri

DELIVERED

Work with the Turkish national oil company, in an industry where inspection, reporting and safety cannot be approximate.

İzmir Metropolitan Municipality

DELIVERED

Road and infrastructure excavation monitoring by drone at city scale, across repeat flights.

Ministry of National Defence, Türkiye

TENDER WON

Tender won for an unmanned aerial system programme. BBA is a registered defence supplier with the active NATO Commercial and Government Entity code **TN069**, assigned by the Turkish Ministry of National Defence, and our systems are codified with NATO Stock Numbers.

Pınar Karşıyaka · Karşıyaka SK

PILOT

Sports analytics pilot with a Turkish Basketball Super League club and its football side: workload, injury risk and match video analysis on one platform.

Djibouti

MARKET ENTRY

Co-sell partnership with a local partner. Service platform live in French, Arabic, English and Somali, with a working AI line buyers can test from their own phone.

The fastest way to judge us is twenty minutes with the screen open.

Tell us which of these lines matters on your side and we will show the system running, not slides. If it fits, the next step is one site, delivered together.
